STORM INTERNET

MANDON SOFTWARE

"Storm never miss a beat"

About Mandon

Essex-based Mandon Software develops bespoke insurance software solutions for businesses in various insurance lines. Founded in 1999, the company uses its industry knowledge and experience to craft business-critical software solutions which perfectly match requirements and system specifications to help clients reach their goals.

The challenge

One of Mandon's clients needed a secure shared network to easily distribute files between themselves and their own clients.

The popular online file-sharing solution they had been using eventually became too expensive, and security was also a concern; online visibility increases risk..

Already running several public cloud instances with Storm Internet, Mandon Director David Allaway challenged Storm to come up with a solution needed to meet their business critical needs.

"Whatever challenges you throw at them, Storm is always up to the task."

"They've met our needs at every turn."

The solution

We set up a Private Cloud solution with 2 servers mirrored for redundancy. A Microsoft Windows virtual server was created with 2 x 1TB disk volumes. Combining a VPN & internal network, their client's staff of 50+ now have a common shared network drive that can be accessed from any device anywhere in the world, while remaining completely invisible to the public internet. Access controls via the virtual server allows access to a particular resource on a per user basis.

Cost-efficiency in mind, Mandon minimises hiring expenses by relying on Storm to extend their in-house technical capability. Storm manages all the hosting infrastructure, & provides direct 24/7 support & guidance relating to hosting and general queries.

Reliability has led Mandon to expand its Storm Private Cloud portfolio over the years. Proactive monitoring keeps 24/7/365 tabs on the overall health of every private cloud instance & their business critical services. A team of expert engineers ready to identify & resolve issues before they become a problem. Mandon's mirrored server architecture delivers real time failover technology; if one server fails, another will immediately take its place. Daily, weekly, & monthly easy-restore encrypted backups provide further data redundancy in the event of worst-case scenarios.

The results:

Highly secure and private dedicated cloud-based file sharing

Cost control through a fixed tariff service

24/7 Expert support that extends Mandon's technical capabilities

Fully-managed service that allows the focus to be on business-critical goals

Reason for choosing Storm over other providers:

"Having Storm on board is like having a complete tech team on duty 24/7"
